

WE MAKE

Our technological solutions add value in all those environments that require safety, monitoring and supervision, and this is why we design, develop, manufacture and sell smart electronic solutions for the responsible and efficient control of people, objects and environments.

We want to contribute to developing safe and stable ecosystems, in which the most advanced innovation is the most harmonious: invisible but 100% reliable

We are motivated by a commitment: to give the world a meaning beyond engineering. We come up with ideas to build a better, more efficient, sustainable and safer world.

SENSE

SMARTER SYSTEM FOR A BETTER WORLD.

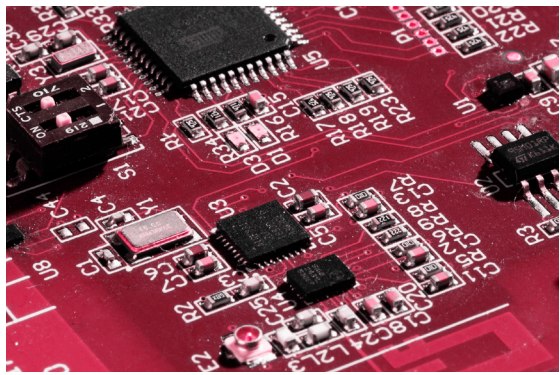

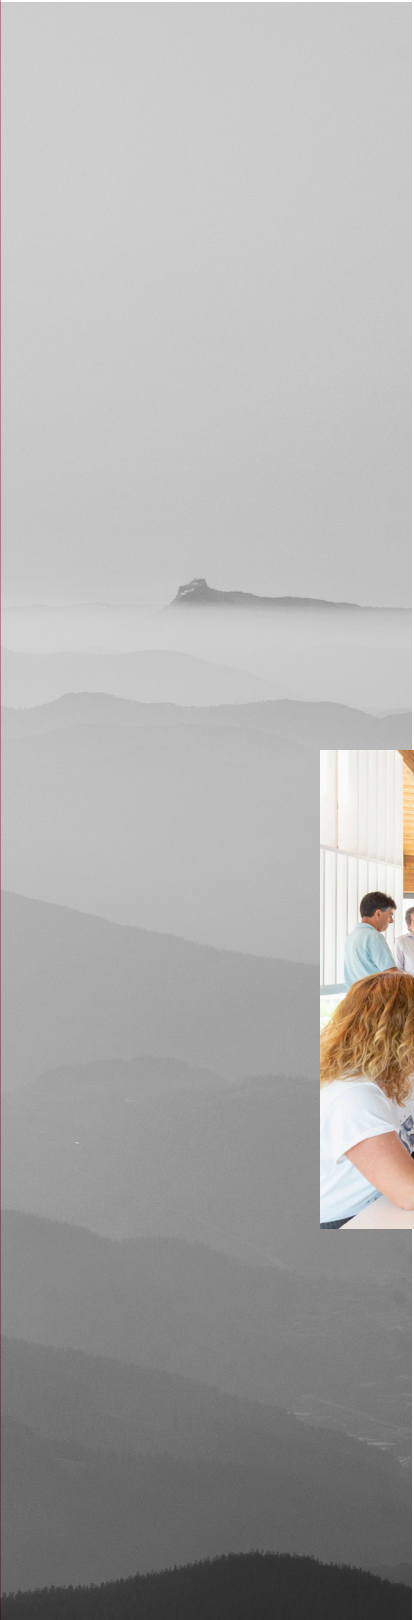

o

A better world is a safer world, where everything is controlled and balanced, and resources are used intelligently and responsibly. Where people can dwell, work and live in a comfortable and protected way.

We need harmonious, functional and safe spaces. And these spaces require solutions that guarantee a 100% safe, 100% useful and relevant experience. Systems that make it possible to monitor, manage and measure efficiency and safety.

From our point of view, ingenuity, design, dynamism and commitment are the best guarantee of an effective result that adds real value.

We want to build a better world.

PEOPLE FOR PEOPLE

The human component is the key factor that highlights the most relevant way in which Enkoa is different: people who think, imagine, solve, create and dream. We are a team of people committed to a service-oriented approach to adapt to your needs and offer you customised projects in a flexible and dynamic way

SMART INNOVATION & SMART MINDS

We have a different way of engineering: we provide smart and creative solutions, thought out from the point of view of innovation and executed through the talent and determination of a team of committed people. Engineering yes, but human. Smart & human & creative innovation.

WE LOVE PLACES :-)

Beyond our work, our goal is to make sense of what we do. Our solutions contribute to creating comfort, safety and stability, handing over the leading role to the spaces and the people who inhabit them. We want to create a better world because we love spaces, places and we want people to feel safe in them.

DESIGNED TO MAKE SENSE

At Enkoa, we put our 5 senses into achieving smart, safe, reliable and innovative control. A philosophy that understands safety from a firm commitment to design and sustainability. Being 100% reliable is being precise and effective, creative and forward-thinking, and being willing to make a commitment in a responsible, engaged way that guarantees results.

DESIGNED TO MAKE SENSE

Energy management systems

High added value products for the Hospitality market.

Electronic locking systems

Electronic products that add user safety.

Space management systems

Systems that help users to manage spaces.

Software iVIEW

Software in WEB environment. Enables monitoring and remote control of devices. APPs applied to our systems.
